1.3.1	<i>Via STSADM</i>	5
1.3.2	<i>Via Site Collection Administration</i>	6

# 1 Installation

The Connected Systems Content Rollup web part for SharePoint® Foundation 2010 installation is based on SharePoint solution deployment best practise. It has been packaged into a set of SharePoint® Solutions called a WSP files.

## 1.1 Adding Solutions to SharePoint

The WSPs are added to the Solution store like any other WSP solution, this is done using the following commands: (please ensure the STSADM command is accessible via the PATH environment variable)

```
STSADM -o addsolution -filename CS.SharePoint.Publishing.Rollupwebpart.wsp
```

## 1.2 Deploying Solutions to SharePoint

Once added to the solution store using the commands listed above, each feature can be deployed to the appropriate site collection(s). This can be achieved using the following methods, either via STSADM or Central Administration.

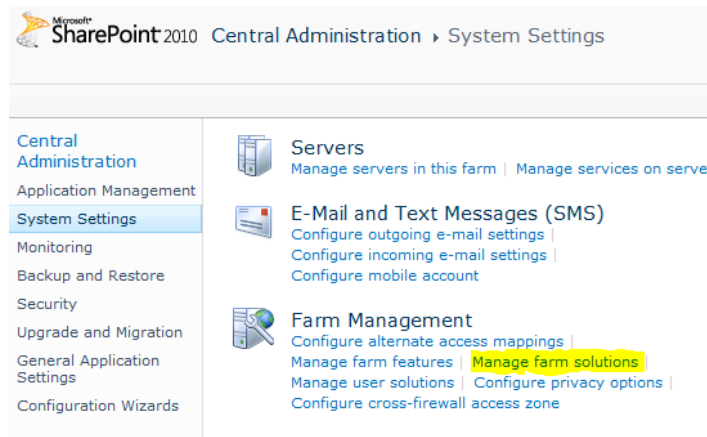

### 1.2.1 Via STSADM

The STSADM command is:

```
STSADM -o deploysolution -name CS.SharePoint.Publishing.Rollupwebpart.wsp -url http://<url> -immediate -allowgacdeployment -force
```

### 1.2.2 Via Central Administration

Alternatively, deployment of the solutions is achieved via “Central Administration | System Settings | Farm Management | Manage farm solutions”

Once selected and assuming there are no other solutions deployed to your farm, the solution will be listed as follows.

The screenshot shows the SharePoint 2010 Central Administration interface. The breadcrumb navigation is "Central Administration > Solution Management". Below the breadcrumb, it says "This page has a list of the Solutions in the farm." On the left is a navigation menu with "Central Administration" selected. The main content area is a table with the following data:

Name	Status
cs.sharepoint.publishing.rollupwebpart.wsp	Not Deployed

On selecting the "CS.SharePoint.Publishing.Rollupwebpart.wsp", select the "Deploy Solution" command on the next screen. This will present the following:

The screenshot shows the "Deploy Solution" page in SharePoint 2010. The breadcrumb navigation is "Central Administration > Deploy Solution". Below the breadcrumb, it says "Use this page to deploy the solution." On the left is a navigation menu with "Central Administration" selected. The main content area is divided into three sections:

- Solution Information:** Information on the solution you have chosen to deploy. Fields include Name: cs.sharepoint.publishing.rollupwebpart.wsp, Locale: 0, Deployed To: http://test.internet/; http://internet/, and Deployment Status.
- Deploy When?:** A timer job is created to deploy this solution. Please specify the time at which you want this solution to be deployed. Options include "Now" (selected) and "At a specified time:" (3/3/2011 3 PM 00).
- Deploy To?:** The solution contains Web application scoped resources and should be deployed to specific Web applications. Please choose the Web application where you want the solution to be deployed. A dropdown menu shows "http://extranet/" highlighted in yellow. A warning message below reads: "Warning: Deploying this solution will place assemblies in the global assembly cache. This will grant the solution assemblies full trust. Do not proceed unless you trust the solution provider."

Select the "Web application" (highlighted in yellow) to deploy this solution to. Once deployed, you'll be returned back to the Solution Management page.

The deployment status should be "Deployed" on the solutions.

## 1.3 Activating the Content Publishing Features

Once added to the web site, each feature needs to be activated. This can be achieved using the following methods, either via STSADM or Site Collection Administration.

### 1.3.1 Via STSADM

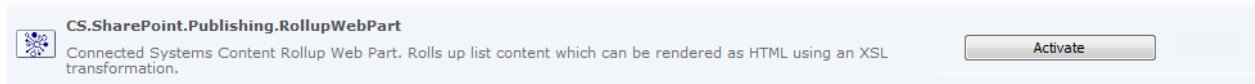

The STSADM commands are:

```
STSADM -o activatefeature -name CS.SharePoint.Publishing.Rollupwebpart.wsp  
-url http://<url> -force
```

### 1.3.2 Via Site Collection Administration

Alternatively, activation of the features is achieved via “Site Actions | Site Settings | Site Collection Administration | Site Collection Features” ([/\\_layouts/ManageFeatures.aspx?Scope=Site](/_layouts/ManageFeatures.aspx?Scope=Site))

You will be presented with the following screen.

Press Activate on the web part to turn on the Content Roll Up features for the Site Collection.

The Content Roll up is now ready for use!
